# ECORASTER<sup>®</sup> BLOXX

# ECORASTER BLOXX

## Why ECRASTER®?

- ✓ Quick and easy to install (about 20 m<sup>2</sup> per person per hour)
- ✓ Low transport and handling costs
- ✓ High load capacity (up to 800 t/m<sup>2</sup> filled)
- ✓ Safety locking system
- ✓ Surface reinforcement with natural drainage
- ✓ Extremely versatile thanks to the BLOXX system being fully compatible with other 50mm grass or gravel filled grids
- ✓ Minimises maintenance
- ✓ Non-slip and crackproof
- ✓ Weatherproof and environmentally friendly
- ✓ Resistant to frost and UV radiation
- ✓ Easy to fit to borders or cut to shape

## Preparations

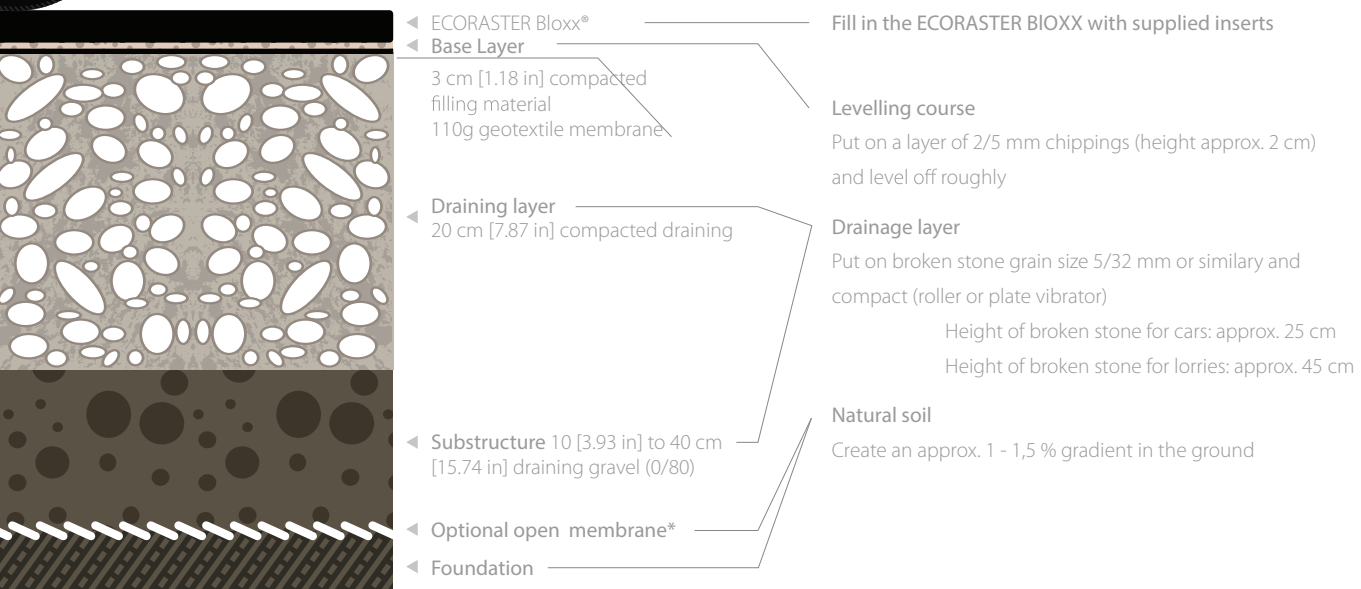

### Determining how much sand, broken stone etc. you need

Before determining how much chippings / broken stone etc. you need, you should specify exactly the height of the surfaces. With larger surfaces you should work with a spirit level or laser. CBR ratings will depict the depth of sub-base that you need to install.

If you do not build a base layer, surface drainage is not assured. Not only that, movement in the natural soil can cause unevenness. ECRASTER® considerably increases the load capacity of the surface, but it goes without saying that even ECRASTER® will be tested to its limits if the entire ground gives way extensively.

## Example: car park bay delineation ECORASTER® BLOXX

Optional open membrane

# ECORASTER® BLOXX

## Working with the preconnected grids

ECORASTER® is quick and easy to lay without machinery. The system is delivered in preconnected units of 12 sections and can be taken straight off the pallet and laid in one go.

### Installing

To lay the grids, start in one corner of the area. The lugs of the first row must point in the direction you are working in. The subsequent rows are then pressed into the lugs of the laid surface. We recommend to use a plumb line when installing ECORASTER.

### Disconnecting

The preconnected sheets can be taken apart if necessary. Lay the sheet you wish to take apart on another sheet and, using your foot, press the tiles you want to remove down and out of the safety locking system.

### Fitting – cutting to size

For quick and clean tile cutting, the following tools have proved most effective in practice:

- Angle grinder with diamond tipped blade

If there should be some kerbstones, make sure to leave a gap of min. 5 cm.\*

The ECORASTER system should be installed level to surrounding edges.\*

To avoid surface distortion at the edges caused by the shear forces of cars, the ECORASTER System can be fixed with ground anchors- at the rear end of the parking area.\*

As an alternative to 'J' pins you may also just press down the rear part of the ECORASTER BLOXX\*

\* Direction of travel from left to right

## CBR (California bearing rate)

Application Load	CBR % strength of subgrade soil	DoT sub-base thickness (mm)
Fire trucks, coaches and occasional HGV access	>6	100
	=4<6	120
	=2<4	190
	=1<2	380
Light vehicle access and overspill car parking	>6	100
	=4>6	100
	=2<4	135
	=1<2	260

### Field guidance for estimating sub-grade strengths

Consistency	Indicator			Strength	
	Tactile(feel)	Visual (Observation)	Mechanical (Test)	CBR	CU
			SPT	%	KN/SQM
Very soft	Hand sample squeezes through fingers	Man standing will sink >75mm	<2	<1	<25
Soft	Easily moulded by finger pressure	Man walking sinks 50-70mm	2-4	Around 1	Around 25
Medium	Moulded by moderate finger pressure	Man walking sinks 25mm	4-8	1-2	25-40
Firm	Moulded by strong finger pressure	Utility truck ruts 10-25mm	8-15	2-4	40-75
Stiff	Cannot be moulded but can be indented by thumb		15-30	4-6	75-150

# ECORASTER® BLOXX

## Things to bear in mind!

Irrigate surface before installing ECORASTER®! Fleece from geotextiles reliably prevents of mixing up the ground construction layers with the soil.

Only limited suitable for areas which are mainly used by trucks / heavy load.

### Tip

For quick and clean cutting to size, a circular saw has proved most effective in practice. For smaller corners which must be cut exactly to size, we recommend that you use a compass saw or strong pruning shears. Do not cut the grids in advance. If possible, lay them over the border and then cut them. Use a small base (slat / board / ECORASTER® tile) to make it easier to cut.

## Accessories

- **Parking space markers**

A variety of block colours are available to signify edge details or bay markings

- **Slope angles**

Universal Slope angle adjustable up to 90° used with connecting grids

- **Block sealants for a permeable UV stable surface**

- **Geotextiles**

## Care instructions

ECORASTER BLOXX should be cleaned regularly to ensure gaps are debris free
